Will Throws His Hat in the Ring

WM. LAUT

Mr. Laut has definitely decided to seek the Liberal nomination for the Cochrane constituency. A number of Liberals of the district have prevailed upon Mr. Laut to again allow his name to go before the Convention which will be held at Cochrane on May 1st.

Mr. Laut carried the Liberal banner in the 1926 and 1930 elections. He was defeated on both occasions by the sitting Member R. M. McCool, by very narrow margins.

Jubilee Cancer Fund

Entertainment and Dance Arranged For Monday, May 6th.

In common with the rest of the towns, and villages in the province, Crossfield and District have been asked to raise funds for the National Thanksgiving Cancer Fund and so that all might have a chance of doing their part it was suggested that some form of entertainment be staged in this connection.

Last Tuesday in response to Mayor Wood's call a group of citizens attended a meeting, and tentative arrangements were made for a concert and dance to be held on the evening of the National holiday (which has been proclaimed for 25 years of reign of His Majesty King George the Fifth) May 6th in the U.F.A. Hall and the co-operation of all citizens of the district to help this worthy cause is sought. It is readily realized that this is a busy time for the farming community, but remember folks this is an occasion that happens only once in a life time and everyone should arrange to set at least half of this day aside and partake in the doings of the day.

For the concert, artists are giving their time freely, the management of the hall have donated the hall free of charge, various others are giving time and labor all so that the largest sum possible may be sent to Ottawa from this district. Crossfield district has always shown that it can do its share, will it fall down on this occasion? No, a thousand times no.

Help do your bit by coming out to the Concert and Dance, or if not both well take in at least one part of the evening's entertainment and show that you are willing to help on the good work, of "FIGHTING CANCER" the scourge of today's civilization.

The school children of the town and district will be asked to join in a programme of patriotic songs, together with a flag ceremony. Addresses by Mayor Wood, R. M. McCool, M. L. A., and Rev. A. D. Currie.

The formal ceremonies will likely be held at the park or school grounds. See that the kiddies get into town Monday afternoon that they may know and recall in later years just what May 6th, 1935 meant to all the people of the British Empire. It was also decided to open a subscription fund and that lists be prepared and placed in the different business places of the town.

The following committees were appointed:

Entertainment—G. Y. McLean, H. R. Fitzpatrick, Fred Stevens and P. L. Johnstone.

Patriotic Celebration—Mayor W. Wood, Councillors C. Asmusen and W. Spivey, Rev. A. D. Currie, Constable Donald Cameron, and the teachers of the local school.

Subscription Campaign: Jas. Belshaw, R. D. Sutherland and P. L. Johnstone.

NOTICE

Notice is hereby given that all property owners in the Village of Crossfield, must have their premises cleaned up before the sixth day of May.

Social Credit

Cochrane, Alberta
The Crossfield Chronicle
Dear Sir:

In view of the fact that Mr. Aberhart's broadcasts have long since lost any educational value on the subject of Social Credit, and have become a broadcast of ridicule and abuse of the U.F.A. and the Alberta Government, I feel that any citizen is now entitled to lay some actual truths before your readers. In doing this I know well that I will be subject to a certain amount of the same abuse as has any one else that does not see eye to eye with Mr. Aberhart.

I do not recognize what Mr. Aberhart is sponsoring as Social Credit. He has very skillfully camouflaged his scheme of taxation with the term Social Credit. He tells us it is a scientific distribution of goods. Very scientific indeed. Some old game of consumer and producer paying the bill under a new name. Here are the actual facts. Basic dividends estimated by Mr. Aberhart for 12 months to be issued by the State Credit House to adults of Alberta amounting to 120 millions of dollars. Mr. Aberhart says the State Credit House will be rebated by an unearned increment charged into the retail price of goods. Here are his own words which are undeniable. "There will be a slight reduction of retail prices plus an unearned increment to be paid by consumer." He does not say just how much this unearned increment will be. Here is the catch, beware.

The total retail sales and receipts for 1934 in Alberta were 176 millions of dollars. Reduce the present retail prices by 10 per cent which would be a large reduction not a slight one. Never in the history of this province have the retail merchants and wholesalers been working on so small a margin of profits. We find retail receipts and sales for 1934 would have been reduced by 10 per cent 176.4 millions of dollars.

In times gone by Mr. Aberhart said basic dividends were for food, clothing and shelter only. Now he says there is nothing to stop any one from converting part of the basic dividend into Government bonds. His speakers coming into the country have said there is nothing to stop the farm women from saving part of this and taking a trip. Promising anything to get support. (Continued on Page 8)

Meeting M. D. of Rosebud

A meeting of the Council of the M. D. of Rosebud was held in Crossfield on Saturday, April 20th. All members were present.

Several applications for seed grain advances were investigated and passed.

The mill rate for municipal taxes will be 6 for the current year. Wages and fees at same rate as last year.

Hospital cases, relief, and other routine matters were reported.

Tennis Meeting Monday Night

A meeting of the Tennis Club will be held in the Bank Rooms next Monday, April 29th at 8 p.m. A full meeting is desired to consider whether the Club should continue. Remember the date.

Track Buyer Suspended

Considerable anxiety was felt in the district last Thursday when it became known that "Crawford" of the Crawford Grain Co. had been suspended by Commissioner Blatchford.

Quite a number of local farmers had sold cars of grain through Earl Devins, agent for Crawford Grain Co. and as full settlement had not been made, naturally all were anxious. Mr. Blatchford, Grain Commissioner has assured the parties concerned that they will not lose a cent, as their claims will be paid in full.

This is indeed good news as it is only about two years ago, that a grain track buyer took a big nose dive, and left a local farmer holding the sack to the tune of several hundred dollars.

NOTICE

To the Shareholders of the Crossfield Mutual Telephone Co.

In future there will be no individual telephone bills sent to each subscriber as in the past, and it will be appreciated that all rentals be paid not later than the 25th of each month at the office of the Secretary.

T. Tredaway, Secretary.

Builders And Wreckers

Glancing through a little trade magazine the other day the writer came across a short bit of verse entitled "Wreckers," which, in these days and times, is worthy of still wider circulation. So we reproduce it:

I watched them tearing a building down,
A gang of men in a busy town,
With a ho-heave-ho and a lusty yell,
They swung a beam and the side wall fell.
I asked the foreman, "Are these men skilled,
And the men you'd hire if you had to build?"
He gave a laugh and said, "No, indeed!"
Just common labor is all I need.
I can easily wreck in a day or two
What builders have taken a year to do."
I thought to myself as I went my way,
Which of these roles have I tried to play?
Am I a builder who works with care,
Measuring life by the rule and square?
Am I shaping my deeds to a well-made plan,
Patiently doing the best I can?
Or am I a wrecker, who walks the town,
Content with the labor of tearing down?

All over this world of ours there are men and women earnestly striving to build—people in governments, in churches, in education, in finance, in industry, in business, statesmen around the League of Nations council table, sitting in international conferences, or engaged in diplomatic negotiations. They are trying to build anew out of the wreckage and upheaval of political, economic and social conditions thrown into chaos by the Great War and its bitter aftermath. They are striving to save civilization, and make it a finer thing than anything hitherto known.

But because the times are temporarily out of joint, weaknesses have developed in the economic system, social evils have become multiplied; in a word, because abnormal conditions exist and many people are in difficulties, the "wreckers" have become bold and walk the town blatantly engaged in the easiest of all tasks—that of tearing down. Men and women who never constructed anything, who lack both the ability and the incentive to construct, are busy themselves in criticizing the efforts of the builders, imputing unworthy motives to them, seeking to wreck anything and everything of a constructive nature that is attempted.

Even the best and most patient of people are inclined to be critical and become fault-finders. In fact, how often are people now heard to speak in praise of anything, of any institution, or of any effort that is being put forth? Rather, is it not the general attitude of denunciation and attack blame?

The popular thing to-day seems to be to destroy, to wreck. In some countries they are deliberately trying to destroy religion and so to revert to the dark ages; in these and other countries the attempt is being made to deprive people of liberties won through the suffering and bloodshed of past generations. The wreckers would in a day tear down the constructive work of centuries.

There are those, of course, who still hold fast to the faith that is in them; who still believe in liberty as the sacred right of the individual citizen; who hold true to democratic forms of government and trust in the people and hatred of dictatorial autocracies.

Builder or wrecker—which are you? Which class has brought mankind to its present civilization? Which class lifted mankind from the cave-man stage? Which group has developed modern medicine, which is responsible for modern inventions, which built our transportation and communication systems, our modern towns and cities, which brought into being the higher standard of life in this twentieth century? And was it not the wreckers who precipitated the Great War and are responsible for the whole train of evils which have followed?

The builders are still building in the face of enormous difficulties and the opposition of the wreckers; the builders are striving to save civilization which the wreckers would destroy through revolution and bloodshed in order that out of civilization's crash they may reap goulash benefits.

Each of us may well take stock of ourselves, study our present habits of thinking, examine our actions, watch our words—in brief, take a measure of our lives and see whether we are builders, "patiently doing the best we can," or merely wreckers "content with the labor of tearing down."

To Keep Informed

A representative of the Dominion government will visit Denmark soon to study operation of a pest development plant using a formula for which representatives of a British company have been seeking a subsidy for development here. This step is taken in order to keep fully informed of any new fuel development that might prove economically useful to Canada.

Funds For Memorial

More than 29 countries are now enlisted in the campaign to collect funds for a Florence Nightingale memorial. It is to take the form of endowed post-graduate courses of training in nursing, to be conducted in London. The League of Red Cross Societies have financed such courses for several years, but no longer has funds for such a purpose.

Indian Did Not Forget

Sends Gift To Lawyer Who Saved

His Son In Trial
Sixteen months ago a Nanaimo jury acquitted Andrew Moses, slender Port Alberni Indian, of a charge of attempted murder—a charge laid after an Indian from the west coast of Vancouver Island, who had allegedly stolen Andrew's girl-wife, was stabbed through the heart and saved from death by a young Victoria surgeon.

For two days the jury listened to how Andrew had followed his pretty 18-year-old wife whom he had married according to Indian custom.

When he found her there was a fight and Charlie Sam was stabbed in the heart. Sam's life was in doubt for more than a month but he recovered eventually and Moses went on trial.

When the jury returned its verdict Chief Moses, Andrew's father, broke a two-day court room silence. "I don't forget you," he said to R. L. Maitland, K.C., his son's counsel. "I don't forget you save Andrew's life. Andrew's good boy. You won't forget me."

Recently Mr. Maitland received two eight-foot intricately carved totem poles. What each figure and character denotes he will probably never fully know, but whenever he looks at them he will know that the old chief did not forget.

BROKE HER LEG
AGAINST A STAIRWhilst Hampered by
Rheumatism

"Two years ago," writes a woman, "I was suffering with rheumatism in my legs, and when walking upstairs one day just kicked my right foot against the stairs, and broke my leg just below the knee. I was in hospital for four months, and when I came out someone advised me to try Kruschen Salts. I did so, and have no trace of rheumatism. I would not be without my daily dose of Kruschen, which I take every morning—half a teaspoonful in warm water."—Mrs. P. B.

The six salts in Kruschen stimulate the liver and kidneys to healthy regular action; assist them to get rid of the excess uric acid which is the cause of rheumatic pains. When poisonous uric acid goes—with its deposits of needle-pointed crystals—there's no doubt about these aches and pains going too!

Bank Of Canada

Will Pay Its First Dividend To
Shareholders Next July

When the Bank of Canada pays its first dividend next July the amount going to each shareholder will be based upon the time the first share instalment was paid. It was learned at Ottawa.

Applicants for shares were required to send their orders for \$12.50 for each share requested, representing one-quarter of the cost per share. Dividends will be reckoned, therefore, on \$12.50 per share from September 1, 1924, to January 2, 1925, and on the full purchase price of \$50.00 per share from January 2 to the date of declaration, probably July 2.

The actual rate of dividend will not be known until it is declared by the board of directors, but under the terms of the Bank of Canada Act, section 31 of the Bank of Canada Act, it cannot exceed 4½ per cent. a year, cumulative. Any excess profits over the maximum dividend requirements go to the rest fund and the consolidated revenue fund of Canada.

Want Branch Lines

Fits Is Made For Completion Of Two
Branch Lines In Northern

Saskatchewan
A plea for completion of two branch lines of the Canadian National Railways in northern Saskatchewan was made before the select standing committee on railways by C. R. McIntosh (Lib., North Battleford). Mr. McIntosh was supported in his request by F. G. Davies (Cons., Athabasca).

At present a branch line runs north from North Battleford, Sask., to St. Walburg, a distance of 90 miles, but the remaining 100 miles to Beaver River Crossing is unfinished. This line was projected originally to join North Battleford with Edmonton. Mr. McIntosh urged the road be completed, and estimated the cost to be not more than \$350,000.

The other line was from North Battleford to Edmonton, via Spruce Lake.

A baby crying for an hour uses enough potential energy to climb to the top of the Washington Monument.

Idea Netted Personal Fortune

Sir Guy Standing Made Money Sell-

ing Old War Equipment

If it had not been for the Great War, Sir Guy Standing might not have been able to take up acting as a hobby.

He is well known for the excellence of his paintings and his adventures in the British navy, for which he was knighted by the king. But he said that when the king's sword descended on his shoulders, he had but \$40 in his pocket.

Sir Guy, after the war, observed miles of United States tanks, tractors, automobiles and other equipment along the Rhine. He formed the Motor Organization, Ltd., set out to buy this equipment and sell it to Europe, which was trying to rehabilitate itself.

When the transaction was completed, Sir Guy discovered Britain needed an amount of leftover war material it would have to get rid of. Such competition would ruin his company, so he managed to buy this equipment as well. It took nine years for the company to sell and clear its books, but the result was a large personal fortune for him.

"A fortune," he explained, "which permitted me to make acting my favorite hobby."

"But you can be sure of one thing. I'm through with big business. It leaves too many gray hairs."

Sir Guy is 60 and one of Hollywood's popular characters.

Drinking And Driving

Danish Professors Conclude That

These Two Do Not Mix

Drinking and driving don't mix was the conclusion of Danish professors, who recently tested the reactions of a group of drivers who had been given the alcoholic equivalent of three nice highballs. Tested by apparatus designed especially to test mental and physical alertness, it was found that the highball equalled 17 per cent. slower to react than those persons who had gone thirsty.

Consumption of alcohol, showed the experiments, adversely affected the speed of a driver in applying the foot brake and the strength of his grip on the steering wheel.

Marine Food

Say Seaweed Contains All Of The

Important Vitamins

Down to the sea for seaweed will be man's next step in his quest for food. Prof. Josephine E. Tilden, University of Minnesota, botanist and leader of a scientific expedition to Japan, Australia and New Zealand, to collect marine algae, said at Minneapolis.

"Marine algae," said Prof. Tilden, "are sources of all four of the important vitamins, A, B, C and D."

Saw It All Right

Elizabeth Harwood, Cleveland, visited a seeress. She was told "your husband will come back soon, he's tired of a blond" and "your husband is having trouble with the police." "Yes, sir," the fortune teller continued, "I see iron bars and blue coats. It means jail." It did. Miss Elizabeth Harwood, an unmarried policewoman, took the seeress to jail.

Little Journeys In Science

THE SPECTROSCOPE

(By Gordon H. Guest, M.A.)
Scientists have shown that the earth and every star which can be observed by the telescope, including the most distant, are composed of the same substances. Of course the proportions are different, but the substances are not.

A glass prism in the hands of the great scientist Sir Isaac Newton in 1672 commenced the train of thought that led to this discovery. Newton observed that the prism split up ordinary sunlight into the various colors of which it is composed. The prism was the beginning of a very powerful instrument of science, namely the spectroscope, which was developed about a hundred years later. It is this instrument that tells us that all the suns and planets are composed of the same materials in different proportions.

The spectroscope sees more than our eyes enable us to see. Man can only observe those substances that give off vibrations to which our eyes are sensitive. The spectroscope is sensitive to all vibrations that matter sends out. We cannot see colorless gases, but the spectroscope can. In fact this instrument can see gases so plainly that it can tell one from another. This is because every solid substance and every kind of gas sends out vibrations, each having a rate of vibration of its own. Science has determined the rates of vibration of the various solids and gases of which the earth is composed. When the same vibrations come from other planets and suns scientists know that they are composed of the same materials that are in the earth.

Research Council

Work Carried On By This Body Is

Worth Millions To The Farmers

With their work estimated at "tens of millions of dollars" in value to farmers, associate committees of the National Research Council ended their seventh annual convention held at Winnipeg.

Dr. H. M. Tory, president of the council, declared in his windup address that the group had as much of Canada's future in its hands as any other body of Canadian citizens. The work was worth millions to farmers, he declared.

Research was said to Dr. O. B. Aamodt, University of Alberta, who will shortly join the staff of the University of Wisconsin. Regretting Dr. Aamodt's departure, the council members extended him best wishes in his new work. Tribute to Dr. Tory's work was voiced by Dr. W. C. Murray, president of the University of Saskatchewan.

Sub-committees were re-established and their chairman named.

Motor Car Industry

Demand For Cars In United States

Puts Industry In High Gear

The No. 1 industrial colossus of the United States, the motor car industry, is in high gear. In haul-away trucks, in freight cars and in drive away processions the product of the assembly lines is moving from factory to dealer and on to consumer in heavier volume than at any time during the last five years.

Gaining momentum steadily under the impetus of a swelling consumer demand, the industry has assembled more than 1,313,000 passenger cars and trucks since Jan. 1. During 16 weeks of 1935, the industry produced as many units as were manufactured in all of 1932. Output for that year, lowest point in the depression, was 1,431,494 cars and trucks.

Does Not Want Freedom

Rev. L. D. Stuehlard has for a constant companion on his motor trips about the Wind River Indian reservation in Wyoming a domesticated wild finch. Seven years ago he captured the bird near Castle Rock, Colo., after it had broken a wing. It soon became a household pet and, although free to leave at any time, returns to its cage each night.

Japan's New Ships

Merchant Marine Fleet Finest Naval
Reserve In World

The Japanese are leaving no stones unturned in their expansion to major world power. Their new merchant marine fleet, the finest naval reserve in the world, is speedily dominating Pacific Ocean shipping. One of six new luxury liners being built by Japan has entered service; a fleet of 50 freighters which travel at speed of more than 20 miles per hour, span Tokyo to San Francisco in 11 days with rich cargoes of silk. This constitutes a tremendous saving in time and dollars.

Few Get Them

The average woman needs 12 pairs of shoes a year, shoe experts have estimated. They enumerate the kinds as follows: One pair for sports, four street pairs (one for each season), four pairs of formal daytime pumps, and three pairs of evening shoes—for spring, summer, and the fall-winter seasons.

CANAPAR

Conserve's Parfait

Have Had Busy Year

British Department Of Scientific Research Covers Wide Field

From ships to fruit jellies is rather a far stretch, but it is a stretch easily covered by the British Department of Scientific Research, as proven in the annual report of that body, just issued.

It is impossible, of course, to do more than touch upon the activities of the research experts during the past year, except to say that they have dealt with such far-apart media, as steel, coal and ships, and marsh-mallows, apples, fruit jellies and soiled sweats.

The department which deals with the woolen industry has developed a new process for producing unshrinkable wool, yarns and fabric claimed to withstand the rigors of laundering, which is being exploited under mill conditions. It is hoped to have materials available for the public early this year.

New fabrics specially suitable for motor car upholstery have been made from wool and rubber latex. A considerable advance has been made in the protection of clothing, etc., against moths and mildew. Some of the results are applicable not only in mill practice, but also in the household. The protection of furs under storage conditions has also been accomplished.

Advances in the direction of improved methods of food storage have been another noteworthy feature of the year's work.

A new method of cooling ships' holds, which offers economies in space and equipment and is suitable for a wide range of cargoes, has been devised, and is being adopted in some of the new tonnage under construction for the Australasian trade.

Another piece of research which will be good news to parents of small boys has resulted in a recommendation of steps to manufacturers to prevent, to a considerable extent, boiled sweets being reduced to a sticky mass by the absorption of moisture.

And if the preceding does not show variety—well, what does?

Helps Men And Boys

Y.M.C.A. Aims To Fit Men For Leadership And Service

A committee endeavored to re-define the aims and objects of the Y.M.C.A. and worked out the following tentative definition:

"The Y.M.C.A. helps men and boys to achieve mental, spiritual and physical poise.

"Its central purpose is the extension of the Kingdom of God through worthwhile activities touching every area of life.

"From it go into the world, men fitted to assume their share of responsibility, having learned the art of leadership and of service."

Prof. Watson Kirkconnell when asked to suggest the content of a definition, submitted the following:

"For God and man, we labor to equip
Body and mind and soul through fellowship.

To join as friends in study,
Prayer, and game.

And raise up leaders in the Master's name."

Electric Goad Is Efficient

More Humane For Animals Than Old Style Whip

Old-fashioned whips for driving horses and cattle may be replaced by an ingenious electric goad, which is at once humane and efficient.

Instead of belaboring the animals brutally, the driver, equipped, merely touches the beast with the end of his cane. The cane is supplied with an electric battery, and a light touch is sufficient to guide the animals in the desired direction. The efficiency of the electro whip is astonishing. The shock, though convincing, is absolutely painless and does not injure the skin or flesh in any way. The current is automatically switched on when the animals are touched, and turned off when the cane is raised, so that the use of current is very economical.

The electric goad which was exhibited at the Leipzig Fair complies with the laws for the prevention of cruelty to animals.

Experiments in Canadian laboratories have resulted in discovery of a method of processing the sap of the sugar maple in such manner that the maple syrup may be extracted in greatly concentrated form.

"What is a budget?"

"Well, it is a method of worrying before you spend instead of afterwards."

BRITISH TROOPS SAMPLE GAS ATTACKS DURING MANOEUVRES

Demonstrations of chemical and anti-gas defence are frequently held at the anti-gas wing of the Small Arms School, Winterbourne Gunner, Salisbury, where army instructors are training. Above we see soldiers marching through a chemical smoke screen while in training. Afterwards they will be sent to the various depots and centres through the British Isles to instruct in gas defence.

Lazy Turkeys Are Tender

Exercise Makes Meat Tough Opinion Of Oregon Man

The lazier they are, the better they are. That is the formula C. C. Deter follows in raising thousands of turkeys for eastern markets every year. He sent 2,700 birds to market in two weeks, receiving a fancy price of 25 cents a pound. And this largely because his birds are perhaps the laziest turkeys in Oregon.

Exercise is taboo on the big Mollala turkey ranch. The turkeys roam and eat in clover and are later fattened with wheat and oats and topped off with corn. They only need enough ambition to pick up their food.

"The more exercise the tougher the meat," Deter claims. "My turkeys are separated into small lots and never allowed to run. I want them to grow fat and lazy. The lazier they are, the more tender the meat."

Sailing Vessel Had Record

Used During War In General Deep Sea Freightage

The old sailing vessel, William T. Lewis, whose log books contain a thrilling war record, is being converted into a hog-fueled carrier at the shipyards in North Vancouver, B.C.

Built in Glasgow in 1891, she was used during the war in general deep sea freightage. After several voyages she was singled out by a German submarine whose commander ordered the vessel's crew to abandon ship, then opened fire with explosive shells.

The crew landed at Bantry, Ireland, and learned their ship had survived the German's fire and had been towed into Liverpool. Her lumber cargo had kept her afloat. She was repaired at heavy cost and continued in service.

The Next Treatment

Stern was the glance the corner cat at the quick doctor who had just entered the witness box.

"And when you were called in," he asked, "What did you give the deceased?"

"Give him? Well, I gave him ipecacuanha."

"Indeed," sneered the corner. "And I suppose you know that in the man's condition you might just as well have given him the aurora borealis?"

"Quite so—quite so, sir," said the witness, blandly. "It's a pleasure to meet a man of medical education. That's exactly what I should have given him if he hadn't died!"

Just Decided

A clever lawyer, addressing a class of aspirants for legal honors, sought to impress them with the necessity for carefully weighing the exact meaning of testimony.

"For example," he said, "supposing I told you that three frogs were sitting together on a log, and one decided to jump off; how many frogs do you think would be left on the log?"

"Two," answered the class.

"Wrong," corrected the lawyer. "The frog I specially referred to only decided to jump off."

New Orleans has a bi-weekly paper, published in Braille, by five girls.

Hold Unusual Reception

Celebrities Attend Soiree At National Gallery In London

An unusual reception held in London was participated in by the Duke and Duchess of York. It was a soiree given in the National Gallery in Trafalgar Square by the trustees to members of the National Art Collections Fund to mark the completion of the artificial lighting of the famous gallery, and was the first evening function ever held there. It lasted until midnight.

The duke and duchess and 3,000 famous men and women followed each other into the redecorated Florentine Room unannounced. Sir Philip Sassoon and Sir Robert Wilt, the hosts, shook hands with their guests in turn, while at the entrance an attendant murmured "Keep to the left if you don't want to shake hands; to the right if you do."

Guests were warned not to bring their cars because of the difficulty of parking. . . . There were no refreshments of any kind.

The artificial lighting of the galleries, which has been designed to allow them to remain open later in the winter evenings, and perhaps at one, was voted a success by everyone.

Supports Old Adage

Student Proves That Too Much Food Shortens Life

Support for the old adage, "We dig our graves with our teeth," has been found in experiments by Lester Ingles, graduate student at Brown University. Working under the direction of Prof. A. M. Banta, Mr. Ingles found that jars of the little aquatic animal Daphnia given short supplies of food lived on the average 50 per cent. longer than did similar colonies kept well fed. Dr. Banta's explanation was that these animals, thus forced into abstinence, burned their life-force lower, produced and used less energy, and consequently did not "wear out" so soon.—Detroit Saturday Night.

Research conducted at two large American colleges tends to prove that turtles and frogs are deaf to human speech.

Electric Clocks On Ships

Will Keep Pace With Necessary Changing Of Time

Time is going to fly in a more settled manner aboard ships in the future if a new system to be employed upon the two new Union-Castle liners now being built is adopted.

Those who have made any extensive east to west or west to east voyages will know how the clocks have to be altered each day to show the correct solar time. Aboard the average liner the difference is an hour a day. Readers, perhaps, will remember the boards conspicuously shown, bearing the number of minutes that passengers' watches have to be altered to show the correct time.

As it is easier to make just one alteration a day, the jump forward or backward is quite a big one, and rather tends to throw sleeping arrangements out of kilter.

Now, however, it is planned to have electric clocks in the new liners. They will be set up in several parts of the ships, and the frequency of the current supplied to the clocks will be held to a pre-determined value so exactly that it will be possible not only to set the regulators so that the clocks keep time precisely together, but also that they may be made to gain or lose the requisite number of minutes during the succeeding hours, according to the speed and direction of the ships.

The right or lagging of time, split as it will be over the 24 hours, will not be nearly so noticeable.

Meteor Worth Billion

Buried 2,000 Feet Below Arizona Desert Says Professor

If you would get wealthy, go to Arizona.

There, according to Dr. Charles F. Olivier, director of the Flower Observatory of the University of Pennsylvania, is a billion dollars worth of platinum.

The "mugget," however, is buried 2,000 feet below a desert, in the form of a meteor which landed in Arizona several years ago.

Dr. Olivier said numerous attempts have been made to find the meteor, but that it still remains in the desert.

What's In The Can

Grade Plainly Marked On Goods Sold In Canada

Have you ever opened a can of peas and found to your disappointment that they were hard and perhaps not of the size you like best? Yes, this has happened often, but quite unceremoniously.

All fruits and vegetables sold in tin cans in Canada are graded and the grade designation is plainly marked on the label. Fancy quality choice quality and standard quality are found in retail stores. The lowest grade—second quality—is rarely seen. These grades of quality are enforced by Dominion government inspectors and if products are bought by quality satisfaction is assured.

"Fancy quality" is as nearly perfect as possible, selected for appearance and care in preparation. It may be used when uniformity of size and colour are considered important. Use it as it comes from the can, or for special salads.

"Choice quality" is not so perfect in appearance but quite as good in flavour and is packed from tender products. It may be used to advantage where flavour and tenderness are important, but appearance is not so essential.

"Standard quality" lacks uniformity, but is quite as good in food value. It is a very good economy is essential. Fruit of this grade is excellent for puddings, gelatine dishes or frozen desserts. Vegetables may be used in escalloped dishes, soups, salads and for soups.

Commercially canned foods have lost the emergency shelf and taken their place in every day meals. If bought by grade and if different grades of each product are kept on hand, the menus may be varied and economical.

As the can of can is important. It is always economy to buy the largest sized can which may be conveniently used. The following table showing common sizes may prove helpful:

Can size	Approx. measure
No. 1 special	1 cup
No. 1	1 1/2 cups
No. 2 1/2 flat	1 1/2 cups
No. 2	2 cups
Average family will use Nos. 2, 2 1/2 or 2 quart. No. 1 special, No. 1 and 8 oz. may be useful in very small families, or for luxury foods. No. 2 quart is the same diameter as No. 2, but not so tall and the two may be easily confused.	

The Good Book

Bible Could Not Have Been Given Better Name

The following article by Edmund J. Kiefer, appearing recently in the Buffalo Courier-Express:

The Bible is rightly called the Good Book, for it is full of good things that inspire, that help, that cheer, that give understanding and education.

Fools may scorn it but the Lord God wrote it. For He told those who composed it to set down what He had to say; and so they set it down, and so it reads.

There is beauty in the Bible for those who know true beauty, beauty unspeakably lovely and simple, like rays of the morning sun where the earth is sleeping.

There is hope in the Bible for those who are poor and bewildered and very anxious for some reliable assurance in their distress.

Let a man live by it and he need not fear to die by it; for it is a Good Book and in every way a book of truth.

All its dear promises all its bright prospects, all its kind comfortings are reliable and worth believing in; since the Bible in all its stimulating fairness is the written contract and word of God.

Information regarding the production of milk on Canadian farms was collected for the first time in the census of 1911 which covered production in 1910. However, an estimate had been made in 1900 placing the production of that year at 5,866,834,000 pounds. The census figures were (1910) 9,866,741,348 pounds; (1920) 10,976,235,351 pounds, and (1930) 12,854,323,094 pounds, an increase since the beginning of the century of 87 per cent.

Latest calculations of scientists show that a rocket ship, to reach the moon and return safely to the earth, would require a load of 20,000 tons of fuel and would weigh not less than 40,000 tons.

Landlady—"You'll have to pay your bill or leave."

Lodger—"That's very nice of you. My last landlady made me do both."

Canned Foods Popular

Fruits And Vegetables Made Available At All Times Of The Year

Development of the canned foods industry in Canada in recent years has effected great changes in the relation of foods to seasons. To the consumer it has made fruits and vegetables of many kinds available at all times of the year, not always with all the charm of the freshly-gathered products, but with much of their original freshness and flavour. Producers have been provided with an enormously extended market, which has resulted in a large and rapid increase in the volume of fruit and vegetable production. Fresh vegetables for use in the canning industry increased from 157 million pounds in 1921 to 311 million pounds in 1932. Production made a further gain in 1933, being estimated for that year at 6,452,000 cases compared with 6,176,000 cases in 1932, and preliminary figures for 1934 place the pack of canned vegetables at approximately 305,323,530 pounds.

Canadian canned fruits and vegetables are enjoying increasing popularity abroad as well as at home. Improved quality of canned foods, which are produced under the supervision of the Canadian Government, has been an important factor in increasing the domestic consumption as well as opening the door to expanding foreign markets. Exports of practically all canned fruits and vegetables show increases, and reflect the esteem in which Canadian canned goods are held in world markets. Exports of both canned fruits and vegetables increased from a value of \$1,704,102 in 1933 to \$2,409,954 in 1934.

No Such Official

Title "Prime Minister" Does Not Appear In Canada's Statutes

The House of Commons accepted a correction from the senate and admitted there is no such official in Canada as a prime minister, legally. When the House passed the bill to set up an Economic Council it provided that the "prime minister" should be chairman.

The senate amended the bill to make it the "first minister" and the House adopted the amendment.

Nowhere in the statutes of Canada is there a reference to a prime minister, although in one or two places a "first minister" is mentioned. Sir George Perley, acting leader of the government, cited one instance of the expression "prime minister" being used officially.

It was a proclamation issued for the Confederation Jubilee in 1927 when Rt. Hon. Mackenzie King was so described. No law officer of the Crown would make such a mistake, said Hon. Ernest Lapointe (Lib., Quebec East). He wondered who had drafted the bill.

Always On The Job

Robot Will Give Time To British Phone Users

The time-giving device for the British Telephone Service is quite a neat idea. At "central" there will be a series of talking film tracks which, when working together will give the time in minutes and seconds after the hour. All very complicated, but not to the subscriber. All he or she will have to do will be dial a pre-arranged series of letters. The E has been assigned the number 12. It has been suggested that the talking machines will reel out the information wanted in smooth and satisfactory manner. The Post Office found that thousands of people each day were ringing up for the time, hence the decision to put their inventors to work on the above scheme.

Yet another device is nearing perfection for commercial purposes, whereby recordings are made of telephone conversations so that they can be re-heard if occasion warrants.

Clock Strikes Thirteen

Was Especially Altered For Workers In English Village

In the village of Worsley, near Manchester, in the gateway to the Earl of Ellesmere's park, there is a clock which strikes thirteen. It has an interesting history.

When the great Duke of Bridgewater was constructing his canal he had great difficulty in inducing his workmen to return punctually at 1 o'clock after the dinner hour, their excuse being that they could not always hear the clock strike one. The duke said he would remedy that, and instructed a clockmaker to alter the clock so that at one it would strike thirteen.

The earth's average temperature for a year is figured to be 57.7 degrees Fahrenheit.

FANCFUL FABLES

WORLD HAPPENINGS
BRIEFLY TOLD

Two hundred varieties of slippers are being made in a new factory at Northampton, England, largely for the American trade.

Quarters usually well informed, said a national publicist is planned this spring or early summer on Germany's re-armament and possible return to the League of Nations.

France's imperial economic conference, the first in the nation's history, closed a four months' session with a "fifteen-year plan" as its major achievement.

A meeting of all Nazi department heads in the famed "brown house" at Munich, Germany, has decided no quarter henceforth shall be shown to Nazi church opposition, it was disclosed.

An invitation to Canadian Boy Scouts to attend two weeks' jamboree by Polish Scouts this summer on the 25th anniversary of scouting in that country has been received by the governor-general, as chief scout for Canada.

Thirteen men implicated in the recent Venetian revolt, including M. Pliotakakis, godson of former Premier Eleutherios Venizelos, were sentenced to prison terms ranging from two to 20 years. Nine were acquitted. Pliotakakis got 20 years.

Great Britain is quietly mobilizing her civilian forces for defence against gas and bombing attacks; it was disclosed when Colonel E. M. Cowell, director of the British Red Cross in Surrey, reported for 1,000 men and women for volunteer first aid nursing work at Croydon airport.

More than 160 fighting craft will take part in the royal jubilee naval review off Spithead, July 16. The flag of 12 admirals will be flown and the assembly will constitute the biggest peace-time demonstration of naval strength since the "test mobilization" in the same waters in July, 1914.

Indians Win Appeal

Judgment For \$18,300 Awarded Northern Saskatchewan Band

Judgment for \$18,300 and costs was awarded recently of the Saskatchewan Indian band near Leask, Saskatchewan, against the federal department of Indian affairs by Hon. Justice P. E. Angers in exchequer court, according to word received at Prince Albert.

Action for \$20,309 was based on the premises funds of the Indians had been improperly used by the department, contrary to the treaty of 1876. Richard Mulcaster, K.C., assisted by W. G. Elder, Prince Albert, appeared for the Indians at the trial at Prince Albert last fall. R. G. Hamilton, Regina, acted for the crown.

The successful action was based on the contention funds of the Indians were used to provide medical services, purchase stock, pay the farm instructor and for other purposes for which, under the treaty, free provision by the Dominion government had been promised.

The judgment also restrains the Indian agent at Leask from farming on the reserve.

A Television Newspaper

Placed in Operation By Radio Committee in Moscow

Called the first television newspaper, the "Telechronique" has been placed in operation by the Soviet Radio Committee in Moscow. It is really a talking picture film, and is televised from Moscow to be picked up by anyone having the necessary apparatus. Two radio receivers are needed, one to pick up the sound, and the other working on a different wave length, to pick up the vision. It is predicted that television illustrated newspapers will be seen in many countries within two years.

Want Olympic Grant

Ask For Dominion Support For Expenses For 1936 Games in Germany

Executive officers of the Canadian Olympic committee waited on Finance Minister E. N. Rhodes to ask for a Dominion grant toward expenses of the 1936 games in Germany where Canada and 55 other nations will be represented. For the last games the federal treasury doled out \$10,000 towards the expenses of the Canadian team. Mr. Rhodes promised to take the request under consideration.

Teacher asked our young hopeful what came in like a lion and went out like a lamb and he answered: "Father."

Marked For Distinction

Royal Society Of Canada Honors With Fellowship 21 Men

The Royal Society of Canada recently announced election of 21 men to fellowships in its five literary and scientific sections. Two of the newly-elected fellows are French-Canadians, the rest English-speaking.

In the French literary and historical section the new fellows are Jean Charbonneau, Montreal lawyer, and Maurice Hébert, Quebec civil servant and provincial government publicist.

In the chemistry and physics section five new fellows elected, among them, Gordon Merritt Shrum, associate professor of physics at the University of British Columbia.

Two new fellows in the geological section are Dr. H. C. Gunning of the Geological Survey of Canada, Ottawa, and Ralph Leslie Rutherford, associate professor of geology at the University of Alberta.

YOUR HANDWRITING REVEALS
YOUR CHARACTER!

By LAWRENCE HIBBERT
(Grapho-Analyst)

(All Rights Reserved)

I have often been asked what practical value it is to anyone to have their handwriting analysed? Well, the more we know of ourselves, our innermost natures, the greater will be our understanding of ourselves, our qualities, characteristics, talents.

And the more we understand ourselves, the greater our opportunity of good conduct in the work we are doing, yet not knowing what to do to effect a change for the better? If you are married, are you contented?—or is disquiet and unhappiness creeping in, with perpetual bickering between yourself and your wife or husband?

Do you make friends and keep them?—or are you living the life of an involuntary recluse, unable to enjoy the society and companionship of real friends?

Are you self-contented?—or are you diffident and bashful, restrained from realizing yourself to the full because of your qualms and self-consciousness? If you go through life without knowing and understanding yourself, your faults and your virtues, your merits and your weaknesses of character and disposition—you will be seriously handicapped.

Graphology helps you to know yourself, to the end that you will seize on your strong points and make the most of them; and shows you the way to overcome the weak traits, so that you will not be handicapped in the race for happiness and success.

Handwriting is not merely a matter of putting your pen to paper. You have to use your brain in order to write. And because the brain is the captain of your body, everything that you do emanates first from your brain. Handwriting is merely the physical expression of the brain impulses. Whatever you are and what you might be if you make the fullest use of your capabilities, are expressed in your handwriting.

Handwriting will not, of itself, effect a change in you, but it will show yourself, and what traits you have but are not utilizing to the full. And knowledge is the forerunner to action.

Would you like to have your character analysed from your handwriting? Have you any friends whose characters you would like to know? The author of these articles will send you a personal delineation. Send specimen of the handwriting you wish to be analysed, stating birth date in each case. Send 10c coin in each specimen, and enclose with a 3c stamp addressed envelope to: Lawrence Hibbert, care of Winnipeg Newspaper Union, 175 McDermott Avenue, Winnipeg, Man. All letters will be treated confidentially, and replies will be mailed out as quickly as possible. Please allow at least two weeks for your answer, however, owing to the volume of mail that is coming in.

Had No Sentiment

Sentiment apparently has no place in the business philosophy of an East Boston junk peddler—even where a dead horse is concerned. Seven hours after his horse dropped dead on Bennington Street the junk peddler, whose name was withheld, returned with hammer and chisel and removed the animal's shoes. He then went his way, leaving to police the task of arranging removal of the carcass.

Since 1929 there has been a steady decline in the per capita consumption of bread in Canada. This, says the statistical report of the industry for 1933, is no doubt due to two factors, viz., the lessened demand resulting from a decrease in purchasing power and the changes in the dietary habits of the people.

POPULAR APPOINTMENT

STANLEY H. YOUNG

Who has just been appointed General Manager of Christie, Brown and Company, Limited. Since returning from overseas, after four years' service with the Canadian Corps in France, Mr. Young has been connected with the company in the capacities of Cashier, Office Manager and District Sales Manager, in Winnipeg and Toronto. He organized and opened branches in the new Western Canada division and since 1933, has been manager of Head Office branch in Toronto. His appointment to General Sales Manager of the company is a popular one in the trade where he is well known.

Mr. Young was born in Sunderland, Ontario, and has developed a hearty interest in community welfare and boys' work. He is a director of the Kiwanis Club of West Toronto, and the Community Y.M.C.A.

Recipes For This Week

(By Betty Barclay)

RAISIN BREAD PUDDING

2 large slices bread, cut in cubes
1½ cups (1 can) sweetened condensed milk
1 cup water
½ cup raisins
1 teaspoon vanilla
2 eggs, separated

Cover bread crumbs with sweetened condensed milk and water. Allow to stand 30 minutes. Whip until blended. Add slightly-beaten egg yolks, raisins and vanilla. Fold in stiffly-beaten egg whites. Pour into buttered baking dish. Bake in moderate oven (350 degrees F) thirty minutes, or until brown. Serves six.

HAM AND CELERY LOAF

1 package time flavored gelatin
1½ cups warm water
¼ cup vinegar
¼ teaspoon salt
1 cup finely chopped cooked ham
1½ cups finely chopped celery
1 tablespoon scraped onion
2 sweet pickles, finely chopped.
Dissolve gelatin in warm water. Add vinegar and salt. Chill. When slightly thickened, fold in remaining ingredients. Turn into loaf pan. Chill until firm. Unmold. Serve in slices. Garnish with crisp watercress. Serves eight.

The amount of branded beef sold in Canada during the month of February, 1935, was 3,774,855 pounds. In February 1931 the amount was 983,571 pounds; in 1932, 1,549,558 pounds; in 1933, 2,999,968 pounds and in 1934, 2,778,358 pounds.

FAMOUS AIRMAN WEDS POPULAR ACTRESS

Our picture was taken at the wedding of Mr. T. Campbell Black, who with C. W. A. Scott, won the England-to-Australia air race, and Miss Florence Desmond, the stage and screen actress, in London. Left to right: Mr. C. B. Cochran, famous prospector, who gave the bride away; Mr. Campbell Black, Mr. Black, and Sir Macpherson Robertson, the donor of the England-Australia Air Trophy and prizes.

Medical Science Advances

New Approach To Unsolved Problem Of Heart Trouble

A new approach to the unsolved problem of coronary thrombosis, the heart trouble that threatens those who work under high pressure, was described by scientists.

The report was made to the Federation of American Societies for Experimental Biology by Jane Sands Robb, M.D., of Syracuse University College of Medicine.

Coronary thrombosis is a failure of the blood supply to one or more of the 13 muscles which operate the human heart. Dr. Robb's work is a method of identifying some of the specific heart muscles which go wrong.

It is an advance of a technique which physicians have been using for 30 years in analysis of the meaning of motions of the electric tracing pencil in electrocardiograms of the heart. The machine which does this was invented by Einthoven about 1900.

These motions are noticeably different in coronary thrombosis. Dr. Robb has been able to interpret these designs on the heart chart in terms of individual heart muscles. Her work shows that each muscle when injured, as in coronary thrombosis, makes a different pattern on the electrocardiogram.

The result is a further solution of the riddle of coronary thrombosis in animals' hearts and evidence that the solution will work equally well on human hearts.

New Principal For McGill

A. E. Morgan From Hull, England, To Assume Duties This Fall

Arthur Elstace Morgan, M.A., principal of University College, Hull, England, has been appointed principal and vice-chancellor of McGill University to succeed the late General Sir Arthur Currie. It was announced by E. W. Beatty, chancellor of the institution.

The famous Montreal educational institution, of the public works program, founded in 1821 by the late Sir James McGill, had been without a principal and vice-chancellor since Nov. 30, 1933, when Sir Arthur Currie, former commander-in-chief of the Canadian corps in France, died at Montreal after a long illness.

Announcement of the selection of Sir Arthur's successor was made following a special meeting of the university's board of governors.

Principal Morgan was educated at Trinity College, Dublin, and has occupied professional positions in the University of Bristol, University College, Exeter, and the University of Sheffield, in which university he occupied the chair of English language and literature prior to his becoming principal of University College, Hull, in 1926.

The new principal is a distinguished scholar and recognized as one of the leading authorities in the empire on the subjects of English language and literature. Mr. Morgan is in his 49th year and will, it is expected, arrive in Montreal Sept. 1.

Makes Long Journey

Released at the People's Carnival held in Birmingham, England, last October, a toy balloon has just been found hanging to a tree in a forest near Uglea, Latvia. It had flown 1,200 miles, had braved winter gales, and had crossed seas and mountains, but was still in good condition.

SUNDAY SCHOOL LESSON

APRIL 28

THE HOLY SCRIPTURES

Golden text:

On how I love I thy law!

It is my meditation all the day.

Psalm 119:97

Devotional Reading: Psalm 119:106-112.

The Value of the Scriptures, Psalm 119:7-11. The law, the testimony, the precepts, the commandments, the ordinances of Jehovah—all of these expressions are terms for the Old Testament Scriptures, especially for the sacred Law which they contain. This, the Psalmist declares, is perfect, restoring the soul; sure, making wise the simple; right, rejoicing the heart; pure, enlightening the eyes; true, and righteous altogether.

The fear of the Lord is clean, enduring for ever. "When among the five terms, each clearly significant of the Scriptures, the Psalmist introduces the abstract expression 'the fear of the Lord,' he must mean the awe, the obedience, the discipline and the love of the Law which is the burden of his song." (George Adam Smith).

More to be desired are they than gold, yea, than much fine gold. Then, with heart aglow, the Psalmist cries, More to be desired are they than honey, and the droppings of the honey-comb—the purest of the honey. Sweeter than honey itself, than honey from the comb, Moffatt's translation. Moreover by them is thy servant warned; in keeping them there is great reward.

Public Works Undertakings

Inclusion Of Railway Equipment In Government Program

Guarantee of equipment securities of the Canadian National and Canadian Pacific Railways to the extent of \$15,000,000 is a feature of Dominion government legislation of which notice has been given to create employment by public works and underpinning throughout Canada.

Inclusion of the railway equipment works in the government's re-employment legislation had been forecast but it had been expected the amount would be double the figure named in the resolution. Extension of the public works program, launched last year, and other works undertakings are to be included in the measure.

For nearly a year the government has been considering representations from the makers of railway equipment in Canada seeking federal guarantees to cover equipment orders for both systems. Some employment had been created in the Algoma and Sydney steel plants a year ago by the Dominion government guaranteeing the cost of rail orders until such time as the companies took delivery. The equipment orders suggested in early representations had been for around \$30,000,000.

Cannibals Dislike Smokers

Lots Of Tobacco In Protection Says French Geologist

To live long among the cannibals of the New Hebrides, the thoughtful explorer carries plenty of tobacco. Dr. Edgar de la Rue, French geologist, who arrived in New York from France, explained.

"The cannibals don't like people who smoke," he explained, "because it impairs the flavor of the meat."

Examining volcanoes is an important part of Dr. de la Rue's research, and the natives don't like men who approach a volcano, because it might wake the devil and cause an eruption. So for protection the doctor carries lots and lots of tobacco.

The flesh of enemies, cut in small pieces, wrapped in banana leaves and stewed, is called "laplap" and is such a great delicacy it is reserved for men only.

The New Hebridians are strictly honest, however, never stealing anything from each other except vines. It's wife-rustling that causes war, that causes feasts, so life moves in a happy round, for all cannibals except those potted.

Will A Yard Long

Probate Document Was Sold In London For \$190

The parchment probate of the will of William Harvey, the discoverer of the circulation of the blood, was sold recently in London for \$190. There was a yard or so of crisp parchment, as fresh as when it was granted in the name of Richard Cromwell, Lord Protector of the Commonwealth. The scribe must have taken great advantage of the details of Harvey's many gifts. Harvey died in 1657.

A talking clock, giving a three "pip" signal like the B.B.C. model, is the latest device in the postoffice for warning trunk telephone users of the length of the call.

GARDENING

Gordon L. Smith

Longtongue Vegetable Season

It is good business to make several sowings for each vegetable. If this is not done, all will mature at the same time, and there will be a feast or a famine. After all, with such things as radish, spring peas, corn or practically everything else, the time they are best eating is when they are fresh, that is just mature, and taken right off the stalk. They must be quickly grown and used immediately when they are the proper size. These vegetables will deteriorate whether they are left in storage or ripening in the vegetable rows. The good gardener, to avoid this, has his vegetables coming along continuously, a few feet of lettuce and baby carrots and bean pods for the table all season. It is a good plan to sow a third of the package, a week or two ahead of the regular time, another third for a fortnight and the balance still later. With some things like peas which must be sown in early April, the first growth during the cool weather, but two sowings can be made, one at the first of May, and the other ten days later, but by using early, medium and late varieties the season can be extended up to six weeks.

These Flowers Will Grow

It is not any more difficult to grow beautiful flowers than a few rows of corn. In fact, it is easier. Of course there are certain things like gladioli and roses, delicately shaded iris and tender statice lilies which certainly will not thrive on neglect, but there are also a dozen or so annuals, and a few herbaceous perennials, which require practically no attention, the minimum of attention. The little Alyssum, for instance, for edging walks or borders, takes a fortnight or less to get to six or eight inches in height. It will bloom all season long, and it looks almost anywhere if the dead flowers are sheared off with clippers or even a lawn mower two or three times. Portulaca is another which one can neglect. It will bloom all season long, and it looks like a little larger. It thrives almost anywhere, though it should not be neglected. In rough and ready perennials, there are Evening Primroses, practically any of the hostas, monarda, lupine and Oriental Poppies.

International Relations

Not Studied Sufficiently By British Commonwealth Of Nations

C. T. de Water, high commissioner in London for South Africa, said he believed the foreign policies of the nations of the British Commonwealth had not been studied sufficiently by Britain or by the countries of the empire as a group.

Addressing delegates to the Imperial press conference, he said: "We have not studied the problem of our relations with the outside world sufficiently closely. The world should be inoculated with the germ of peace rather than overcome as at present with the germ of war."

Mr. de Water urged that the press could perform invaluable service to the world in this direction if it was organized to mould public opinion.

Cecil Harmsworth, brother of Viscount Rothes, who presided at a banquet in London to bid delegates during their visit to South Africa they attended "three race meetings, six garden parties, 16 receptions, eight banquets and 20 luncheons— which occasioned misgivings as to whether they would enjoy any further hospitality."

Major J. J. Astor, chairman of the Times, described the tour as "an excursion into wonderland." He said the delegates returned with a greater confidence than ever in the flexibility and durability of the structure of the empire.

Have Many Clients

"Anti-Suicide Service" In Berlin Is Kept Busy

Berlin's "Anti-Suicide Service," with headquarters in a quiet street back of the police headquarters, is reported to be kept busy. Clients are received by a kindly old man and woman who do not ask the names of their visitors. The aged couple give visitors advice and try to persuade them that life is worth living. They ask for nothing in return. Among those who take advantage of the "service" and most of whom leave the little house with renewed hope are people who have just left prison and dare not return to their families, wives who have lost their trust in their husbands, and others who have failed in their examinations and, of course, young lovers.

Will A Yard Long

Probate Document Was Sold In London For \$190

The parchment probate of the will of William Harvey, the discoverer of the circulation of the blood, was sold recently in London for \$190. There was a yard or so of crisp parchment, as fresh as when it was granted in the name of Richard Cromwell, Lord Protector of the Commonwealth. The scribe must have taken great advantage of the details of Harvey's many gifts. Harvey died in 1657.

WORKS PLAN IS LEFT OVER FOR EASTER RECESS

Ottawa.—The House of Commons started a five weeks' Easter recess with the \$33,000,000-construction bill left high and dry. After a long day of verbal battles several appropriations were undecided when the 6 o'clock adjournment hour rolled around and will be re-considered May 20 when parliament reassembles.

The Liberals were charged by Minister of Railways R. J. Manion with blocking the construction bill but they shouted angry denials. The chief stumbling block was a vote of \$1,000,000 for a tunnel between the Toronto mainland and summer resort on Hanlan's Island in the harbor.

Liberals urged the vote be changed and enlarged, if necessary, to start a slum clearance scheme in Toronto, claiming there was no necessity for the harbor tunnel. Conservatives argued the Dominion was obligated by a 1913 agreement to connect the mainland and the island with a bridge or tunnel and pointed in glowing terms the development of a new port base in the harbor which would become the aerial hub of the continent.

Indication the government intended to do something to relieve slum conditions was given by Minister of Public Works Hugh Stewart.

The Toronto vote should not be shifted to slum clearing, he said, but he advised the house to wait for the legislation to be introduced after the recess dealing with the recommendations of the housing committee.

When the members packed their bags and dashed for their trains, the following appropriations had passed through committee stage: Railway grade separation fund, \$1,000,000; geological surveys, \$1,000,000; Montreal harbor improvements, \$3,500,000; Quebec harbor improvements, \$1,125,000; canals, \$750,000 and western water conservation works, \$500,000.

The appropriation of \$15,000,000 to guarantee railway equipment securities of the Canadian National and Canadian Pacific Railway had not been reached.

Flight To Honolulu

Clipper Plane "Pioneer" Makes Trip Under 18 Hours

Honolulu.—The big clipper plane "Pioneer" alighted on Pearl harbor here, after a 2,400-mile flight from Alameda, Calif.

Gliding gracefully down in a wide circle, the clipper split the waters of Pearl harbor exactly three minutes before her scheduled landing time. The ship had spent 52 minutes cruising over the city and adjacent canal fields.

The clipper travelled the 2,400 miles in 17 hours and 45 minutes, cutting seven hours off the standing record for the distance. At times it hit a 160 mile-an-hour clip.

The clipper's time was just seven hours better than the previous mark in the six other successful flights across the Pacific from California. A navy mass flight of six planes made the trip in 24 hours and 45 minutes, Jan. 11, 1934.

Its crew of six flashed back frequent messages of progress.

References to sea, sun, moonlight, and the beauties of sunset above cloud banks that obscured the water were made in the reports which otherwise were as routine as the constant flight of the graceful four-motored craft.

Tax Higher Salaries

Edmonton.—Higher salaries are struck a fresh blow by the provincial government under the terms of a bill to amend the Income Tax Act which was given second reading in the legislature. The act provides for higher levies on those whose incomes, after allowing for exemptions, are in excess of \$5,000 per year.

Progressing Favorably

Edmonton.—Father Chareat, of Grouard, Alta., down into Edmonton after having one hand crushed beneath a snowmobile, was reported by hospital attaches here to be progressing favorably. He may be in the hospital for two weeks. Four fingers were amputated.

Complete Wedding Trip

London.—Sunburned and happy, the Duke and Duchess of Kent landed at Croydon airfield after a flight from Paris completing their wedding trip abroad.

Message Of Loyalty

Senate Unites With House Of Commons In Address To The King

Ottawa.—The senate united with the House of Commons in the address to the King expressing loyal and respectful congratulations on the 25th anniversary of his accession to the throne.

Rt. Hon. Arthur Meighen, senate leader, as mover, and Senator Raoul Dandurand, Liberal leader, as second, moved that the upper house join in the address passed last week by the commons.

"We, who possibly best of all citizens of the empire," Senator Meighen stated, "know of the blessings that flow from the occupancy of the throne by a person of the character and great common sense of His Majesty the King, are particularly pleased to offer our congratulations to us who believe that we are of a country wherein the best forms of democratic government have their birth, it is a matter of extreme gratification that at a time when the institutions of democracy have been subjected to a continuous and ferocious challenge, as never before in their history, our institutions in the full flush of their democracy are praised over by a monarch such as blesses the British Empire."

"We all join heartily in wishing His Majesty King George, to his gracious consort, and to members of the royal family," Senator Dandurand said.

Want Wheat Conference

Propose Meeting To Be Held In Argentina To Discuss Wheat Exports

Buenos Aires.—An invitation to Canadian and Australian farm organizations to send representatives here for a conference to discuss the removal of limitation on wheat exports was sent by the Argentine Co-operative Association. The latter is composed of 25,000 farmers from all sections of the Argentine.

London.—The wheat consultative committee probably will meet in London May 15, it was reported.

The big four wheat exporting countries, Canada, the United States, Australia and Argentina, met in London early in March but failed to reach any agreement for extension of the existing agreement limiting wheat exports, which extends only until July 31 next.

Investigate Auto Industry

Tariff Board To Visit Plants Where Motor Cars Are Produced

Ottawa.—The tariff board will begin the investigation of the automobile industry by visits to the plants which produce motor cars and parts. These visits will likely be made this week, it was learned.

The hearing of evidence will open in Calgary when the board is there in connection with the gasoline inquiry. The board had planned going to Calgary early in May but requests have come from those submitting evidence in that city to have the hearing postponed. The board will comply with this request.

While in the west the board will go to Vancouver where hearings will be conducted in connection with both inquiries. Afterwards the board will return to Ottawa and conclude its hearings in this city.

Lake Navigation Opens

First Cargoes Of Grain Vessels Clear From Port William

Port William.—Threading their way through a passage cut in the ice field, five vessels cleared from the harbor, loaded with grain and headed "down-lake" with the first cargoes of the 1935 season. Vessels were the Stinson, Donnacona, Granby, Winnipeg and Saskatoon, owned by the Canada Steamship Lines.

Sault Ste. Marie, Ont.—Thirteen days ahead of last year, the steamship L. E. Brock opened navigation at this port, upbound for Marquette to load ore.

Protest Coal Price Cut

Edmonton.—Reduction of prices by 50 cents a ton paid by the C.N.R. fuel department to mines in the Coalpur region, was protested in a resolution passed by the legislature, on motion of Chris Pattinson, Labor, Edson.

Seize Lottery Tickets

Niagara Falls, N.Y.—Postal officials here disclosed that 12,000 Canadian lottery tickets mailed from this city to various parts of the United States have been seized. They believe the tickets were smuggled across the border here and mailed.

SENATE APPROVES BILL TO COMBAT DROUGHT MENACE

Ottawa.—Sweeping legislative decks for the Easter recess, the senate gave second and third reading to bills to provide for rehabilitation of drouth and soil drifting areas in the prairie provinces, supply of one-twelfth of the main estimates, and to permit the Bank of Canada to export gold under license as in the case of chartered banks.

The elder statesmen then proceeded to give first reading to measures for a minimum wage, authorizing provision of money to meet expenditures and indebtedness of the Canadian National Railways during 1935, changes in the copyright act relating to performing rights in musical works and reducing the cut in civil servants' salaries.

The bill of T. L. Church (Cons., Toronto East), to compel newspapers to publish a list of their shareholders, had a setback. When the measure was called for second reading, its sponsor, Hon. James Murdock (Lib., Ottawa), moved the bill be discharged from the order paper for the day to be placed on the order paper for June 4. The motion carried.

The rehabilitation bill to spend \$750,000 this year and \$1,000,000 annually for a specified period towards a solution of the problem of drouth and soil drifting areas in the western provinces, saw Rt. Hon. Arthur Meighen, senate leader; Senator Raoul Dandurand, Liberal leader; Senator W. A. Buchanan (Lib., Lethbridge), and Senator J. A. Calder (Cons., Regina) take the floor. All agreed the legislation was desirable to fight the menace.

"A large section of our heritage is threatened," Senator Meighen stated, in speaking of drouth and dust storms in the southern portion of Western Canada. Consequently, he continued, it was the part of wisdom to address the problem of trying to find some way of rescuing from this devastation as much of that area as could possibly be rescued.

The problem was not a simple one, and many had advanced schemes of solution, Senator Meighen said. Opinions of those whose judgment ought to be best differed in important features. For the present, reforestation seemed to hold sway in the minds of public men in the United States, but there was grave doubt as to whether or not this solution would accomplish anything in the immediate future.

In speaking of the proposed personnel of the commission, Senator Meighen stated the intention was to combine the practical with the theoretical, to associate scientific men with those who had actually lived among and wrestled with problems on the land. The commission would devise experimental tests, the cost of which would be met by the money provided.

Sensor Dandurand believed the bill would be unanimously accepted by the house.

Sensor Buchanan declared he looked upon the bill as important not only to western farmers but to the whole Dominion, because if it succeeded in solving the problem it would benefit every person who had an investment in those sections. "If we were to allow the southern parts

JUBILEE TRUST

Here is a picture of Commander J. B. Adams, who has been appointed secretary of King George's Jubilee Trust Fund in the Mother Country.

of Manitoba, Saskatchewan and Alberta, which are affected by drouth and soil drifting, to be abandoned without any effort to reclaim them," Senator Buchanan stated, "the loss to the elevator companies, the railways, the mortgage companies and individuals would run into hundreds of millions of dollars."

"I think," Senator Buchanan said, "the commission will probably find it desirable to make a systematic effort to determine the best means for reclaiming and rehabilitating certain areas, and to this end some trials will probably be undertaken to find out the most suitable uses to which the lands can be put."

Increase In Rates

Railway Commissioners Grant Request For Increase On International Traffic

Ottawa.—The board of railway commissioners has decided to grant the request of the Canadian railways for an increase in rates on international traffic between Canada and the United States to conform with the emergency increases granted U.S. lines by the interstate commerce commission. Increases which range up to seven per cent, and are limited by maximum rates per hundred pounds, will come into effect on April 18.

This board was convinced shippers would have to pay the increases on international traffic in any event. The difference would be that if the board refused the application of the Canadian roads, the increase would all go to the United States railways.

The principal commodities which will be excluded from the increased rates are: Grain, flour, mill products, hay, straw, fruits of all kinds, vegetables, livestock except horses, milk, pulpwood, lumber except certain woods, and fertilizers.

Health Conference

Ottawa.—The conference of provincial ministers of health with Hon. D. M. Sutherland, federal minister of pensions and national health, will open in Ottawa, April 25, Mr. Sutherland stated.

Ran Slot Machines

Edmonton.—The ban on slot machines in this province will take effect July 1 next, when similar legislation also will become operative in Saskatchewan, the legislature in committee of the whole decided.

SETS REMARKABLE SOLO FLIGHT RECORD

Here is Mr. H. L. Brook, British airman, after he had landed at Croydon Aerodrome from Australia. He completed the flight from Darwin to Lympne in 7 days, 19 hours, 15 minutes, thus breaking the record for the solo flight from Australia, held by Mr. C. J. Meisroe, by some thirteen hours.

Price Spread Report

More State Intervention In Business Is Deemed Necessary

Ottawa.—Creation of a federal trade and industry commission with wide powers of law enforcement, supervision over business and suppression of unfair, unethical commercial practices, was the main recommendation of the price spreads commission.

It would be a commission of five men, operating directly under the prime minister in somewhat the same way as the Dominion board of railway commissioners.

"We have been forced by the evidence," the report stated, "to conclude the situation calls for a frank recognition of the necessity of more state intervention in business."

The trade commission would be empowered to:

Enforce the Combines Act to restrain and restore competition.

Regulate industrial monopolies where open competition cannot or should not be enforced. An industry would be declared monopolistic, excepted from the operation of the Combines Act and automatically come within the supervision of the trade commission.

Sanction and supervise agreements between industrial units modifying output and business practice for which no agency exists.

Prohibit unfair competitive practices.

Supervise or co-operate in administering laws relating to merchandising and business practice for which no agency exists.

Administer laws to protect consumers.

Regulate security issues for the protection of the investor.

Co-operate with chambers of commerce and boards of trade in development of commercial arbitration or refereeing of business disputes.

Co-operate with other government agencies, federal, provincial or municipal, in solution of trade problems.

Railway Dining Car Runs

Propose Longer Period Of Layover At Winnipeg

Montreal.—A proposed rearrangement of dining car runs between Montreal and Winnipeg will not have the effect of transferring the headquarters of the dining car department from Montreal to Winnipeg but result in the longer period of layover being at the latter city, W. W. Swindon, general superintendent of sleeping and dining service, Canadian National Railways, stated, here.

Mr. Swindon was making a reply to Aid. Dave Robson, pro-mayor of Montreal, who stated at a public meeting "Mayor Camille Houde will fight to the last ditch any attempt by the C.N.R. to remove dining car headquarters from Montreal to Winnipeg."

RE-ARMAMENT OF GERMANY IS LEAGUE PROBLEM

Geneva.—Germany's re-armament and the whole question of preventing future armaments repudiation of international treaties was thrust squarely on the doorstep of the council of the League of Nations.

Clarifying the hitherto confused picture of just what procedure would be followed here, French Foreign Minister Pierre Laval submitted a draft resolution on behalf of the governments of Great Britain, France and Italy, and on his own behalf backed it up with a strongly-worded denunciation of German re-armament and abrupt repudiation of treaty obligations by her military decrees of March 16.

Great Britain and Italy supported the French spokesman in no uncertain terms, but Foreign Minister Joseph Beck of Poland promptly challenged the draft's proposed strengthening of the league covenant, and with a scarcely-veiled reference to the Franco-Russian accord as'd Poland wondered whether certain suggested agreements were not calculated to prejudice, rather than foster, the peace of eastern Europe.

The draft resolution was couched in such vigorous terms in its expressions that Germany had failed to keep her obligations, and in denouncing unilateral repudiation of treaties generally, as to bring immediately from Berlin semi-official word that if it is approved as it stands the league statesmen might as well abandon entirely efforts to get Germany back into the league.

NAZI CIRCLES SURPRISED AT LEAGUE DECISION

Berlin.—This capital was the centre of a series of startling rumors following condemnation of Germany by the League of Nations council for violation of the re-armament clauses of the Treaty of Versailles.

General opinion was there would be a brusque retaliatory gesture by Chancellor Adolf Hitler and the form it would take was the subject of various conjectures. It was variously rumored, although in each case without confirmation, that:

Chancellor Hitler would now denounce the whole of the Versailles Treaty.

Germany would break off diplomatic relations with Britain, France and Italy, which framed the resolution of condemnation voted by the league council.

Germany would admit no further restrictions on its sovereignty and would disregard the demilitarized left bank of the Rhine.

A more plausible report was that Dr. Fischer would call for a nationwide referendum to show the world the German people were behind him in his international policies.

In Nazi circles the league's decision came as an overwhelming surprise.

Newspapers contented themselves with attacking the Geneva decision and those who participated in it. Official circles maintained silence. It was intimated, however, that passage of the resolution constituted a serious obstacle to the return of the Reich to the league and to the favorable development of the European situation.

Until a few days ago Germany had regarded France as isolated in its determination formally to censure the Reich for its treaty violation. Britain was viewed as the German spokesman at the Stresa conference and the league council meeting, and to the last the Germans could not believe that the resolution would be passed.

Berlin newspapers indulged in unusually strong language in reporting and commenting on the vote. "Geneva sanctions lie!" The Boersen Zeitung, leading financial paper, said in a big headline, and the words "hypocrisy," "provocation" and "warning" marked press comment.

No Wheat Shortage In U.S.

Estimated Production This Year Placed At 625,000,000 Bushels

Indianapolis.—The United States need have no fear of a great wheat shortage resulting from drouth and dust storms, said G. E. Farrell, director of the Division of grains of the agricultural adjustment administration, here.

Farrell, who conducted the first of a series of conferences to be held throughout the middle west and west on plans for holding a referendum on continuing the wheat control program, pointed out the estimated wheat production for this year is 625,000,000 bushels, which is the normal consumption of that grain. In addition there is a surplus of 120,000,000 bushels on hand.

Cancer Fund

Finance Minister Recommends Donation Of \$100,000

Ottawa.—Minister of Finance E. N. Rhodes announced in the House of Commons that the government will recommend donation of \$100,000 to the King George V. silver jubilee cancer fund for Canada.

The fund was initiated by the Countess of Beesborough, wife of the governor-general, as a special thank-offering gift to the king on the occasion of the 25th anniversary of his accession to the throne. Mr. Rhodes made his announcement just before the house rose for the Easter recess.

Fear For Fuel

Ottawa.—The Dominion government must look into a new process of preparing peat for fuel, Hon. W. A. Gordon, minister of mines, told the House of Commons. He said reports about the progress of negotiations with a company interested in the process were not accurate.

Get Leave Of Absence

Toronto.—All war veterans in the employ of the Ontario government will be given leave of absence with salary so they can attend the Canadian corps reunion at Vimy, France, in July, 1936, Premier Mitchell F. Hepburn announced in the legislature.

Conference Between Government And Grain Exchange Officials In Connection With Garnet Wheat

While no official commitment was entered into, a conference between representatives of the Winnipeg Grain Exchange and the government in the office of Hon. R. B. Hanson, minister of trade and commerce, proceeded on the assumption that elevator companies will be protected when the separate grading of Garnet wheat becomes effective July 31 next.

The 1934 amendment to the Canada Grain Act excluded Garnet wheat from grades one and two Northern. The exclusion is to date from the opening of the new crop year. There are now said to be between 50,000,000 and 60,000,000 of bushels of grades one and two Northern which contain Garnet. Elevator companies hold this wheat and are obliged to deliver the quantity according to the grades under which it was taken in. If no provision is made for its protection, they will stand to lose heavily for the reason that this wheat will no longer qualify for its original grades.

The time was devoted to a general discussion of how best the change can be brought into effect. It may be that the elevator companies will be compensated for the loss in quality which must result from the exclusion of Garnet from these grades. Or John I. McFarland, acting for the government, may accept delivery of all of it on the old grades and thus absorb the loss which will result.

While it is clear that the burden of loss will not be placed on the elevator companies, the conference failed to agree upon a method to be pursued.

The grain exchange was represented by Sidney T. Smith, R. T. Evans, and Arthur Darby, secretary. With Mr. Hanson was Rod Finlayson, the law officers of the crown and other government officials. Mr. McFarland was not present.

Five Major Errors

Cause Of Motor Fatalities Given By Insurance Company

What causes motor car fatalities? Violation of certain common rules of the road, which, or should be, known to all, accounts for most of them.

The Travelers' Insurance Company of the United States in its annual compilation of highway accidents finds drivers guilty of five major errors. Of the 36,000 deaths last year, the report shows, 6,850 were caused by excessive speed, 3,470 by driving on the wrong side of the road, 2,740 by not having right of way, 3,820 by driving off roadway, 2,740 by other reckless driving. Pedestrians erred, too, and are taxed with two major causes in the annual roll of fatalities: 4,310 by crossing streets between intersections and 2,690 by walking on runways. These seven causes account for 74 per cent. of the total lives lost—St. Louis Post-Dispatch.

Feed Wheat Diverted

Say Shipments To U. S. From Canada Go To Flour Mills

United States agents are combing the midwest in a hunt for wheat bootleggers, according to a Chicago despatch to the Herald Tribune.

"Because of the swirling storms of dust which last year covered meagre forage in pastures," the despatch says, "and increased the death rate of cattle, the duty on wheat was reduced from 42 per cent. to 10 per cent. to permit its importation for feeding purposes. Investigators have discovered large shipments of the feed wheat to flour mills.

"One shipment of 400 tons from Canada, according to customs men, has disappeared somewhere in the region of St. Paul, and its obvious destination has caused investigators to wonder how much Canadian wheat ever reached the cattle for which it was intended."

Leaks Are Wasteful

If you want to have plenty of hot water at your house, watch your hot water faucets and don't let them drip even a little. New washers cost little and a faucet that leaks even two drops a second can waste more than two gallons of water a day. If the leak becomes even the smallest stream, there may easily go twenty gallons of hot water which you are paying to heat.

An apple tree is in its prime at about 25 years and reaches its "old age" at about 60, figures an agricultural economist.

Likes Antarctic Fare

Lincoln Ellsworth Prefers It To New York Meals

New York restaurants would please Lincoln Ellsworth better if they served sizzling seal steaks or sautéed breast of penguin. "I like the wild taste of such meat," said the explorer, back from Antarctica.

"Seal steak is delicious and the only difficulty with penguin was that it took 17 of them to feed our crew. The breasts are the only parts you can eat."

Penguin eggs, too, are not to be snubbed on a polar menu. They are about the size of turkey eggs and fried or in omelets are fit for any explorer's breakfast.

In New York while making up his mind on plans for another try at crossing the southern back yard of the world, Ellsworth is keeping in trim by wrestling daily. Graying at 64 and tanned as if he had wintered on a Miami beach, he hopes to return to the Antarctic so that early in November or late in October he can attempt another poleward dash.

To the "no what" minded persons of the general public who look askance at polar expeditions, Ellsworth had this to say:

"There are 5,000,000 square miles in the Antarctic—an area equal to that of Europe and Australia, 99 per cent. of which is unexplored. This area must have all the resources of coal, gold and platinum and any other resource found in any other continent. They may be inaccessible today but we do not know what to-morrow will bring."

FASHION FANCIES

799

Ellen Worth offers pattern of this one-piece dress, stitched in box-plait effect. The belt may be adjusted easily to rapidly growing girls. Style No. 799 is designed for sizes 4, 6, 8 and 10 years. Size 8 requires 2 1/2 yards of 35 inch material with 1/2 yards of 35 inch contrasting.

Patterns 25c each. Address mail orders to: Pattern Department, Winnipeg Newspaper Union, 175 McDermot Ave. E., Winnipeg.

The Spring Fashion Magazine is better than ever. Entirely illustrated in color you will find it a very stimulating fashion edition. There are clothes for cruising and clothes to brighten the lives of stay-at-homes. Many delightful little models for the smaller members of the family. Of course, patterns are obtainable for the designs illustrated. Send for your copy to-day, the price is 20 cents.

Queer Chinese Custom

The spectacle of a bride on the way to her wedding ceremony, accompanied by her own coffin aroused the interest of thousands of spectators at Tientsin, China, recently. The bride, a 77-year-old widow, was marrying an 88-year-old farmer, and according to ancient Chinese custom had purchased her coffin years ago. It was her most cherished household possession.

Due to the large amount of pectin contained in Canadian-grown apples, the juice of Canadian apples may be used in other fruits to give a jelly consistency to jams and marmalades. There is no waste in a good apple, even the paring and the core may be used for jelly.

MARS: "Come to my arms and let them babble away."
PEACE: "You must first take off your armour, or you'll crush me."

—L. 420, Florence.

Thinkers Are Real Rulers

Determine Line Along Which Mankind Is To Advance

Behind the invention is the inventor; behind every discovery there is the thinker. The thinker is the real ruler of the world. He initiates new ideas, he behind each great advance, and really it is he who determines the line along which mankind is destined to advance. The thinkers are the world's real leaders; can we not say that they are the world's real rulers? The pen is mightier than the sword!

Being a gentleman is simple. You just do the right thing when there's no power to make you do it.

Nearly 40 per cent. of all college graduates have defective sight.

Became A Boomerang

French Destroyer's Crew Had Queer Experience With Torpedo

While practicing off the port of Brest a French destroyer fired a torpedo which became a boomerang. Instead of pursuing its course to an innocent ending it was impelled by some mechanical flaw to turn round and head for its parent destroyer. It was not carrying a destructive charge so that the physical damage was nil, but the officers of the vessel had to put back to port to recover from the experience.

He: "I have been trying to discover why a woman is so much more curious than a man. Why do you suppose it is, Miss Winnie?"

She: "I don't know, I'm sure, I've never been curious enough to inquire!"

The SNAPSHOT GUILD

More About The Candid Camera

In "candid" photography you must shoot with conditions "as is" That's

Last week we talked about candid photography in general so now let's discuss the personal and mechanical equipment necessary to take candid camera pictures.

First, you must be equipped with a disposition to overcome a few obstacles, for you are going to have them if you are determined to get real candid camera shots. As was pointed out last week, in candid photography you take your pictures "as is."

In candid photography your picture possibilities are limited—or unlimited, as the case may be—by the versatility of your camera, but for the average amateur a small camera with an f3.5 lens will give all the speed necessary. A fast lens plus super sensitive panchromatic film is essential if you are to make your candid camera shots under adverse lighting conditions, in or outdoors. Next in importance is your shutter speed. No, an extremely fast shutter speed is not all-important for candid shots, but obviously it has many advantages.

An ideal combination for your miniature candid camera is an f3.5 lens for your largest speeds ranging from one to 1/300 of a second. With such a shutter you will also find it equipped for "time" and "bulb" exposures.

Slow shutter speeds are important, for there are occasions when you will find it quite necessary to make your candid shot with the lens wide open and then, to get proper ex-

Upward Swing of Cattle Industry Is Indicated By Reports of High Prices Paid For Foundation Stock

Follow Definite Routes

Wild Ducks Use Same "Flyways" As Their Ancestors

Wild ducks migrate along routes followed by their ancestors in four definite geographic regions known as "flyways," according to R. C. Lincoln, naturalist of the U.S. biological survey.

Attention has been drawn to his statements by W. G. Ross, K.C., M.L.A., Moose Jaw, president of the Saskatchewan Fish and Game League.

Result of the discovery that ducks follow four separate flyways each spring and fall means that sportsmen along each route will have to protect their own ducks from fellow shooters as the numbers of the birds will not be replenished by ducks from other flyways, according to Mr. Lincoln.

The ducks, he says, are so strongly influenced by their ancestral lines of migration that they will continue to follow them even though conditions en route or on the wintering grounds become unfavorable.

If the birds should be exterminated in any one of the four major flyways it would be a long time before that region could be repopulated, he says.

He states there is undoubted evidence that the waterfowl of North America have seriously decreased in numbers and, accordingly, that special precautions must be taken to protect their extermination.

The four flyways are known as the Atlantic, the Mississippi, the Central and the Pacific.

Potatoes For Ensilage

Experiment To Be Made As To Their Suitability

For the purpose of preparing and carrying through a detailed program of research on the utilization and marketing of potatoes grown in Canada, an Associate Committee on Potato Research has been appointed, the members of which are officials of the Dominion Department of Agriculture and the National Research Council.

The committee is to inquire into the usefulness of employing potatoes for ensilage. Dr. E. S. Archibald, director of the Dominion Experimental Farms, has arranged with Dr. E. S. Hopkins to include with the silage experiments this year the ensiling of potatoes alone and mixed with other crops, and the Division of Animal Husbandry has been requested to keep closely in touch with these experiments and to observe, through actual feeding trials, the results in comparison with cooked and raw potatoes, which will be available to the Potato Research Committee.

The 1934 potato crop of Canada was estimated at about 80 million bushels which was 10 per cent greater than that of 1933 and six per cent above the average production for the five year period 1929-1933.

Farmers' Creditors Act

3,200 Settlements Arranged Between Debtor And Creditor

At the end of last March 40,316 farmers throughout Canada had sought benefits of the Farmers' Creditors Arrangement Act, Quebec leading with 11,819 interviews, it became known. Interviews with official receivers in other provinces were:

Saskatchewan, 8,778; Alberta, 8,311; Ontario, 5,321; Manitoba, 2,832; Prince Edward Island, 1,192; British Columbia, 1,063; New Brunswick, 714, and Nova Scotia, 281.

Finance Minister E. N. Rhodes, discussing the legislation, said: "The figure of 3,200 settlements in Canada in the short operation of this act is the strongest argument that could be used not only for the legislation but for the purpose of convincing everyone as to that element of fairness and honesty which characterizes debtor and creditor alike in this country."

He: "You know, you're not a bad-looking sort of a girl."

She: "Oh, you'd say so even if you didn't know it."

He: "Well, we're square then. You'd think so even if I didn't say so."

The oldest complete skeleton of mankind which science has found to date is that of a Neanderthal woman who lived in Palestine, perhaps 75,000 years ago.

The recent sales of pure bred bulls in Western Canada are being regarded as a definite barometer indicating an upward swing in the livestock industry. Reports reaching the department of agriculture from these sales receive careful study. They were held in Brandon, Regina, Calgary and Edmonton.

The prices paid by ranchers for pure bred bulls indicate the confidence they have in the future of the cattle business since these bulls were bought to improve stock on the ranges. In the sales, and particularly in the Calgary sale, higher prices were paid than in former years. One bull in Calgary brought a top price of \$11,000.

Improved demand for high grade live cattle in the United States is chief cause for the demand for pure bred bulls, according to Senator D. E. Riley, a rancher himself and particularly well informed on livestock matters. He expects that probably many recommendations of the price spreads commission for helping the industry.

A wide demand for grading hogs on the rail is sweeping Canada, according to applications received by the department of agriculture. This is another phase of livestock marketing dealt with in the report although the commissioners did not take a very definite stand and much has happened since they heard evidence on the subject.

Grading on the rail means grading after the animal has been dressed. This is the practice in Denmark. The practice in Canada has been to grade on the hoof which was the more feasible although admittedly less accurate.

Ovation For Singers

Large Sum Paid Men Who Would Lead Applause

They number about 40 men, mostly Italians. They band together in New York whenever Manhattan's Metropolitan Opera gives a performance. They have no tickets and they need none. A leader passes them in, huggernaut, at the 36th street entrance before the carriage trade arrives. Inside, they station themselves on either side of the house, as waited after Herbert. Witherspoon takes command at the Metropolitan. The Metropolitan management had nothing to say, for it has never officially acknowledged its professional clappers. Their leader, one Harold Lodovichi, was melancholy. Having inherited his job from his father, Claqueur Lodovichi he has trained his men not only to promote enthusiasm at the right time but also to curb it. An inexperienced opera-goer gets a rousing hiss if he applauds at a wrong moment. If the Claque happens to be standing behind him, he may be fairly defamed when the cued moment comes.

The Metropolitan pays its Claque nothing but the singers may buy special service. Claque rarely sang without a Claque. Giggled his and Martini's top notes still bring cheers from the men at the rail. In the old days singers were known to pay as high as \$1,000 for an evening's "success." Now \$25 will buy a fairly noisy ovation.—Time.

With regard to the excellence of quality of Canadian ducks seen on Smithfield market London, England, mentioned in the London Fish Trades Gazette advises show that the large duck farm, Eastern Township, Quebec where the ducks came, is purchasing 35,000 export tags, is in starting packing for export in the near future. The farm expects to double its shipments to England this year.

Own Take To Fly

And now we have flying oxen. "Red" Lymburner, formerly of Niagara Falls south, Ontario, now a live ox from Chibougamau to Okeslane in Quebec last month and plans to transport another shortly. A mining company wanted the beasts for rough hauling where there are no roads.

Haumen, Germany, of Pled Piper fame, is said to have the first non-poisonous illuminating gas supply in the world.

JOHN VAN GUILDER.

TO BE SURE YOU GET Fast Relief

Get tin of 12 tablets or economical bottle of 25 or 100 at any drug store.

DOES NOT HARM THE HEART

An Aspirin tablet starts disintegrating as soon as it touches moisture. That means that Aspirin starts "taking hold" . . . cures even a bad headache, neuritis or rheumatic pain almost instantly. And Aspirin is safe. Doctors prescribe it. For Aspirin does not harm the heart.

Be sure to look for the name Bayer in the form of a cross on every Aspirin tablet. Aspirin is made in Canada and all druggists have it.

CHAPTER XVII.—Continued

Peytot giggled at him.

"Oh, hell, man! There's no use skrimshin' with us. We found the bandanna you dropped when you stuck the pistol in old man Carr's pocket. Come across."

"I got the pistol from Mister Dustin's desk," said Peytot. "What now?"

"You come with us," said Jameson shortly.

CHAPTER XVII.

Sherrif Garcey sprang to his feet as Jameson's car started outside his office. He had just taken old Carr to a bedroom and seen him tucked away for the night under a dose of Bromide. He ran down the steps and almost jerked Jameson from the wheel. Then he saw Peytot huddled in the back seat.

"What you got, Evan?" he demanded. "This's a bad mess as I ever saw. Old Joe's quietly crazy. He swears he didn't tell me about that shootin' because he can't."

"Is he drinkin' again?"

"He is not but I gave him some dope. Anybody who can throw some light on this blot'll be doin' a favor."

"That's what I brought Stone and this man for. Take him inside Jim."

Garcey drew Peytot forth and gave one indignant sniff at him.

"You smell like somethin' the dog buried," he growled. "Where'd you get that stuff from? . . . Peytot crouched and gibbered. . . 'I been phokin' the people who use that for three years an' now you got the nerve to come right to my office stinkin' of it. Come inside."

Inside the little office, Garcey flung Peytot into a chair and turned to Stone.

"Shoot," he said tersely. "And for God's sake try to get on the target the first shot."

Without a word, Stone laid on the desk the bandanna neckerchief; the Derringer pistol, the pieces of cigarettes and the entire one that he had taken from Dustin. Then:

"reconstruct the affair this way," he said. "Here's what I can swear to. . . He told them only what he actually knew. . . That he had taken those peyotl cigarettes from Dustin's pocket. . . Then he swung on Peytot, who sat staring till at him. . . 'Where did you get this pistol?' he asked shortly. . . 'We know you shot Kane. The smell of the peyotl on the neckerchief gives you away. Where'd you get this pistol from?' . . . 'Unless you want to hang, you'd better talk,' said Garcey. . . Still Peytot stared at them. Finally he muttered dully:

"I took the pistol from Mist' Sam's desk. . . ."

"Whose desk?"

"He means Dustin," said Jameson quickly. "How did you put the gun in Mr. Carr's pocket? Better tell all you know. . . ."

"Easy enough," said Peytot. "I slipped in through the back door the minute the light went out. I shot the gun an' stuck it in Mr. Carr's coat. Then I got out before the light came on again."

"Why did you want to shoot a man you'd never seen?" asked Stone. "A man you didn't even know. . . . Why?"

"I knowed who he was," said Peytot. "Mist' Sam told me. He was a man who come out here to . . . to . . . His name's Kane," he said.

"Keene," said Stone sharply. "Not Kane but Keene. . . ."

"Same thing," said Peytot obstinately. "Mist' Sam told me so."

"See here," Stone leaped to his feet with an oath. "This poor fool was played on by Dustin. Dustin holds Carr's note for half the Hour-glass. He wanted the other half that Keene owns. He played on this poor fool. . . . When he jammed the rag and gun in Carr's pocket. . . . Did Dustin tell you to shoot this man?" He wheeled on the shrinking man.

"No, sir. He didn't know I had the gun. . . ."

Garcey, whose face was blood-red with astonishment, stared from man to man.

"Why would Sam Dustin be mixed up in a thing like this?" he asked.

"Till tell you. . . . Stone repeated about the note. He told about his fight with Dustin at the Soda Springs. 'There's another reason why he wants the Hour-glass, too,' he said. 'I'll show you. I've got it in the car.'"

He almost leaped down the steps to the car and was back instantly with a little canvas sack that he emptied on the desk.

"Gold ore," he said. "From a vein that Kane found on the lands of the Hour-glass. Look at this piece. . . ."

His hand lit on that brown-stained piece that he had picked up by the old camp-fire. The Soda Springs Peytot gave a half-scream and slumped into a heap over the desk.

"Not that!" he shrieked. "For Christ's sake not that! I didn't go to do it. . . . My God. . . . And he gibbered and moaned till they thought he had lost what little mind he had."

"There's a lot behind this that we haven't uncovered," said Stone. "Sharply. . . . His tone rang out sharply. 'Where's the old man Kane?'"

"I . . . I . . . Buxton said," said Jameson. "That's blood on that stone. . . ."

"I didn't go to do it," quavered Peytot. The sound of his own voice scared him. "Mist' Sam said you'd find it out. . . . Oh God! He believes. . . . then Dustin is in one hell of a mess. If he's led. . . . and if I arrest the richest cattleman in Seco valley on a false charge, then I'm in one hell of a fix and I'll sure pass it on to you."

"That's all right," Stone grinned. "You get me the ponies and after I've gone, arrest Dustin and don't let him talk or get word. I'll leave at day-light."

They left at dawn with a sand-storm brewing. It began in fitful puffs that started the tumbleweed rolling across the mesa and raised whirling "dust-devils" across the plain. All day they pounded along through the growing storm and made a dry camp at Coyote Crossing. The ponies made no attempt to forage but stood with lowered heads and turned their rumps to the wind that drove the sand like shot and pelted it deep in the blankets.

"It'll be clear to-morrow," growled Peytot. "A sandstorm never lasts but three days."

Down came clear and cold and Peytot lapsed into sunniness that grew with each mile. Old dreams came to him, old visions appeared in

Why at 40 You Think You're "GROWING OLD"

It's Frequently Just an "Idea." Not "Old Age." And According to Scientists, May be Something No More Alarming Than A Touch Of Acid Stomach

At about 40, many people think they're "growing old." They're tired. They have headaches. Stomach upsets. . . .

Well, scientists say the cause, in a great many cases, is merely an acid condition of the stomach. The thing to do is simply to neutralize the excess stomach acidity.

When you have one of these acid stomach upsets, all you do is take Phillips' Milk of Magnesia after meals and before going to bed.

Try this. You'll feel like another person. Take either the familiar liquid "PHILLIPS" or the convenient new Phillips' Milk of Magnesia Tablets. Made in Canada.

Also in Tablet Form:

Phillips' Milk of Magnesia Tablets are now on sale at all drug stores everywhere. Each tiny tablet is a powerful antacid. It's a responsible of Gentle Phillips' Milk of Magnesia.

PHILLIPS' Milk of Magnesia

that long. Dustin'll find out that Keene's not dead."

"That's so. I better swear out a warrant against Dustin. You can arrest him, Sheriff, and hold him three or four days so he will not know I've taken Peytot off into the hills."

"That's better. . . . Garcey sat up. . . . 'What'll you charge him with?'"

Stone grinned. "I could swear out a warrant for cattle rustlin' but he'd get out on bail. I might lodge a charge of complicity in the shooting at the Silver Dollar. . . . Wait a minute. . . . He committed a whop of joy. . . . 'I've got him as sure as shootin'."

I found him with those doped cigarettes on him and Peytot says he has been supplied with peyotl by Dustin. . . . I charge him with violation of the Narcotic Law. . . . That's a Federal offense as well as a State violation. Grab him on that charge."

Garcey rose tempestuously.

"By God," he said, "I'll do it. It's taken a big chance. All depends on what you find. If that car Peytot has told the truth. . . . which I do believe. . . . then Dustin is in one hell of a mess. If he's led. . . . and if I arrest the richest cattleman in Seco valley on a false charge, then I'm in one hell of a fix and I'll sure pass it on to you."

"That's all right," Stone grinned. "You get me the ponies and after I've gone, arrest Dustin and don't let him talk or get word. I'll leave at day-light."

All day they pounded along through the growing storm and made a dry camp at Coyote Crossing. The ponies made no attempt to forage but stood with lowered heads and turned their rumps to the wind that drove the sand like shot and pelted it deep in the blankets.

"It'll be clear to-morrow," growled Peytot. "A sandstorm never lasts but three days."

Down came clear and cold and Peytot lapsed into sunniness that grew with each mile. Old dreams came to him, old visions appeared in

a series of broken scenes. For years of use of that debasing drug had worked on a brain that was never too strong. They were never pleasant dreams. Peytot does not work like that; they were just the horrible phantasmagoria of a partially disordered brain.

Grimacing faces bobbed above a saw-toothed sky-line. They hung to that sky-line with claw-like hands as birds hung to a telegraph wire and they gibbered and moved at him and then ducked behind their menacing claws. A weeping face, the face of old Dad Kane, stared at him from a distant pile of rocks where Stone saw only a coyote yelling. From time to time Peytot wiped the sweat out of his eyes and furtively looked at Stone. How much of these things was real? How much did Stone see?

But Stone rode on through the abiding sands deep in thought. Peytot broke one of his infernal cigarettes into pieces and chewed the fragments as a dog chews an old boot. Suddenly . . .

A burro blundered out from the mesquite-tangle and jogged across the trail, a loaded burro with a top-pack of two buckskins and a pickaxe and shovel. . . . Exactly as old Dad Kane used to make up his pack! Peytot could even see the "Squaw-hitch" that held it! That burro was not six paces in front of Stone when Peytot shouted, his voice shrill with wrath. Then the unspcakable happened. . . .

Stone rode straight through that burro as a man rides through smoke. Then the burro with his pack disappeared in the sand-laden air and a sudden swirl of yellow dust drove down over the place where he had been.

Peytot shouted aloud in shrill-voiced terror and Stone turned on him with a hearty curse. He saw at once that something very real was a matter. Peytot's eyes were white-rimmed with fright but there was no sight in them. If he was seeing things then they were things unseen by mortal man. His mouth was working and white foam lay in the corner of his mouth.

"By God," he said, and his voice broke. "Did you see that? You rode right through him! A loaded burro right in yore path and you rode straight through him!"

Stone jerked him from his saddle, swung from his own horse and stood over the cowering wretch.

"This sand-storm's bad enough," he growled, "without my havin' to ride the range with a damned fool of a drug-addict. Where's any burro?"

"There! . . . My God! There he is again. . . ."

Peytot's wavering finger swung to a spot; then it bobbed up and down as though following a moving burro. Stone's eyes followed the moving finger and saw, above a mesquite bush, the figure of a burro! For a second he stared at it half-paralyzed, then he realized what it was and he began to laugh; a relieved cackle of shrill-voiced laughter that startled himself.

"It's a mirage, you fool," he said. "Look! Don't you see the line of light under his feet; between him and the ground?"

He picked up a rock and threw it with all his force and it struck ground exactly where the burro stood.

"Some prospector over in another valley has got in the just right position for his reflection to be lifted over to us. Let's go on."

But Peytot would not go on. He hung to Stone's stirrup leather and he babbled wildly as Stone had never heard a man talk before; exactly like a frightened child trying to talk courage into itself.

"Say, Stone," he said in a burst of incoherence, "do you believe the dead kin come back?"

"What? Come back? Come back from where? Do you reckon any man who's got a warm place in hell would try to come back to this place? Who'd you think you saw, Peytot?"

"I looked to me like old Dad Kane was at that burro's heels. I seemed to see him with a chew of tobacco as big as a lemon in his face and a short-handled fry-pan stickin' in his boot like he always carried it."

(To Be Continued)

Are You Tired—Listless?

Is your rest broken at night? If your kidneys need attention take GIN PILLS. They will strengthen your kidneys and if you sleep better you will feel better and look better. 24

For the murder of Gerald Keene," quoth Jameson.

Stone laughed and Garcey stared at his heartlessness.

"I got Epps to give out the false news of his death," he said. "It's not dead and he isn't going to die for some time. I hope. I just want to see what Dustin's game'll be when he hears Keene was killed by Carr."

"What do you reckon'll happen . . . ? You can't keep three or four days. You'll be gone a dead man

new Building Material

Phoenix like, German cities of the future will rise out of ashes—or rather ash cones—scientific circles assert. Garbage from ash cones is to be processed to produce a building material having the elasticity of felt, the solidity of wood, the non-conductibility of cork and the non-inflammability of asbestos, it was asserted by German professors charged with research in "erasts," 2095

The Misses Stella Gordon, Mabel Young, Margaret Fitzpatrick and Anne Cameron will canvas the town for subscriptions to the Jubilee Cancer Fund.

Local News

Easter Monday passed off quietly in town. The bankers had their usual holiday, why we don't know, life to them is one long holiday anyhow.

Other than a slight delay on Monday morning owing to a light fall of snow, we have had a week of ideal weather, and considerable seedling has been done.

Hughie McIntyre and his side-kicker Fred Patchell, who does the heavy work, finished drilling a well for Mr. Jamison on the Frisk place, the first of the week, and moved into town on Wednesday and started on a well for Dan McFadyen.

Shoot Starving Cattle

Rocky Mountain House, April 22—Owing to the very long winter; the problem of feed for animals is very acute.

Some cattle have been shot by their owners rather than be allowed to starve to death.

Every bit of hay and straw has been dug up, and with the milder weather, the farmers are in hopes of grass soon to relieve the situation.

Large services were held in the churches in the Anglican Mission on Easter Day. The church at Crossfield looked beautiful with its flowers and crosses.

The flowers were donated by different members of the congregation. Special mention must be made of the roses given by Mrs. Boyle in memory of her husband For nearly twenty years, Boyle has never forgotten to send flowers at Easter for the altar. The decorating and arranging of the flowers was done by the younger members of the congregation under the capable supervision of Mrs. Currie. At the evening service the Junior choir trained by Mrs. Currie sang two Anthems "Christ Arose" and "What are These" in a very beautiful manner, the solo part being taken by Mrs. Currie, and the Misses Verma Pogue, Irene Walker and Violet Currie.

HOW TO MILK

Editor The Kroniki Ders Sir

It has come to my notice that there has been lots of trouble up in the north end of town about milking cows.

I am a dane, some people call me a gracie dane. Danes no how to milk cows.

You tie the cow easy, not too tight, then you get to the back of the cow, and then you say, Wo, Bossie. You say that to fool the cow. Then you start to milk, easy. Don't pull, or the cow will kick. Just go soft, like a lady putting new gloves on her fingers. And if you can sing something, sing. Cows like music. I would like to help the people milk their cows, but I am terrible busy. However, just don't be afraid. The cow is a gentle animal, but it doesn't like sheeks, so if you are a sheek, you better leave that cow alone. Whatever you do, go easy; don't get ruff, and the milk will soon fill your pail.

Yours trolly, Mill Keeweh

P.S. Don't try to milk a cow when he's asleep. That makes him mad.

ALONG BROADWAY

Tom Fitzgerald is playing Mus-kee-Kee off the board.

Two of the House of David ball players came in from the east on Wednesday and were peddling vegetables around town.

Harry Fitzpatrick has joined Jimmie Dickson on a milk diet.

With the farmers all busy on the land, and the citizens apuding their gardens, the old town is about as lively as a grave yard.

More About Social Credit

(Continued from Page 1)

The unearned increment will have to do with the amount of the basic dividend or the State Credit House will go broke.

That means that the consumer will have to pay the 120 millions of dollars back to the State Credit House. Now if every adult in the Province would spend an equal amount, no one would benefit, only the administrative staff required. Using the above figures we find that the unearned increment would have to be a little over 75 per cent on the reduced by 10 per cent retail sales. Instead of receiving \$25 worth of purchasing power per month an adult would receive \$6.25 of purchasing and \$18.75 to pay the unearned increment charged into the retail price of goods to rebury the State Credit House. The whole truth hinges on the amount of each individual's retail purchases. As soon as you spend over a certain amount you are paying the piper.

Let us examine it in a different way. One which Mr. Abernart cannot say is unfair. Let us even include the amount that he says can be converted into Government bonds, and that of his speakers statement that farm women should take a trip on. As purchasing power it is safe to say that one sixth of the basic dividend will be used for shelter, leaving 100 millions of dollars for purchasing power. Add same to the reduced total retail sales and receipts for 1934, making a total of 258 millions. The unearned increment would have to be a little over 41.2 per cent of the retail price of goods.

Instead of receiving \$25 per month of purchasing power one would receive \$13.50 actual purchasing power and \$11.50 to pay the unearned increment. This means that if a person only spends his or her basic dividend they are ahead of the game. Mr. Farmer can you pay for all your retail purchases, of food, clothing, fuel, medical supplies etc. required for your self and family? To say nothing of your repairs, twine, oil and equipment, fuel oil, gas or whatever you require, on the \$26.76 per month you and your wife would receive in basic dividends. This is where you get caught not only paying your basic dividends back to the State Credit House, but also paying for the other persons actual purchasing power derived from his or her basic dividend.

The above not only applies to the farmer but to any other individual making an effort and maintaining themselves as society expects them to do. Less than 30 per cent of our people would be ahead of the game. The other 70 per cent would be in this 70 per cent class. This Abernart scheme of taxation holds no attraction for you.

Now I am a farmer myself and perfectly in favor of REAL SOCIAL CREDIT.

Yours very truly,
P. H. Swanson.

Bedding Out Plants
Place your orders with Wm. Launt for bedding out plants and get Bill Brown's, they never fail to give satisfaction. Cabbages and cauliflower a specialty. Tomatoes, celery and a large number of different kinds of flowers will be ready around May 15th.

Mr. FARMER did you hear any person telling of the wonderful saving in fuel by using a Diesel Motor? Yes, The Model "L" Case Tractor operates successfully on the same low grade oil such as No. 1 and 2 furnace oil, the initial cost of a CASE Tractor is about one-third of the original cost of the others, the upkeep is less than 10 per cent; so why not get a CASE and have the operating results of a Diesel.
